

Yping Moe

Full-stack developer and AI developer building high-performance products.

github.com/ypingmoe · ypingmoe@gmail.com · t.me/ypingmoe

SUMMARY

I am a full-stack developer, AI developer, and C#/Java developer focused on scalable software, automation, and intelligent systems. I build trading bots, blockchain + AI solutions, and specialized Polymarket bot workflows for production use cases.

EXPERIENCE

Full-Stack Web3 Developer — BNRY / BinaryBit

10/2023–01/2026 · Remote, Germany

- Built a production BNB bridge platform with on-chain smart contracts, swap functionality between BNRY and BSC tokens, and a full-featured frontend.

Solana DeFi Engineer — Multiple DeFi Teams

2020–2023 · Remote, US

- Integrated Meteora DLMM active pool, open positions management, and DLMM performance tracking for WiseTrade.
- Built Memepad launchpad with Meteora-integrated token smart contracts, staking rewards, and holder reward distribution.
- Built Pumpfun bonding-curve launchpad fork, including backend, Solana Web3 integration, and liquidity seeding logic.

EDUCATION

Kyoto Computer School · 2012-2014

TECHNICAL STRENGTHS

AI Product Development

LLM workflow design, prompt orchestration, and API integration.

C# Backend Engineering

Robust services with clean architecture, async processing, and APIs.

Python Automation

Data pipelines, model tooling, and scripting for developer velocity.

TypeScript Frontend

Modern web UI built with Next.js, React, and Tailwind CSS.

CORE FOCUS

- AI product engineering and LLM-powered automation
- C#, Java, and Python services for reliable backend systems
- Trading bot developer for data-driven execution strategies
- Blockchain and AI master workflows, including Polymarket bot development
